

Oilseeds: World Markets and Trade

China’s Imported Oilseed Meal Supplies Shift Slightly to Mid-Protein Meals

For over 2 decades, China has been the primary destination for exported soybeans, accounting for over 60 percent of global imports in recent years. These imports are utilized by the largest crushing industry in the world to produce soybean meal for the world’s largest swine herd (approximately half of the world’s pigs) and one of the world’s largest poultry flocks. In recent years, China has aimed to diversify its supplier base and ensure a stable food supply for its population. However, despite efforts to diversify suppliers, China soybean imports have remained concentrated between the 3 major suppliers. Imports of alternative protein meals have increased but are still low compared to soybeans.

Soybean meal is the largest source of protein for feed rations in China, but feeding of mid-protein meal is on the rise. From 2013/14-2017/18, meal from imported soybeans averaged 93 percent of total imported soy meal equivalent (SME).¹ Increased utilization of other protein meals pushed meal from imported soybeans down to 87 percent in 2023/24. Imports of other protein meals on a SME basis more than doubled over this period, largely driven by import growth of sunflowerseed and rapeseed meal.

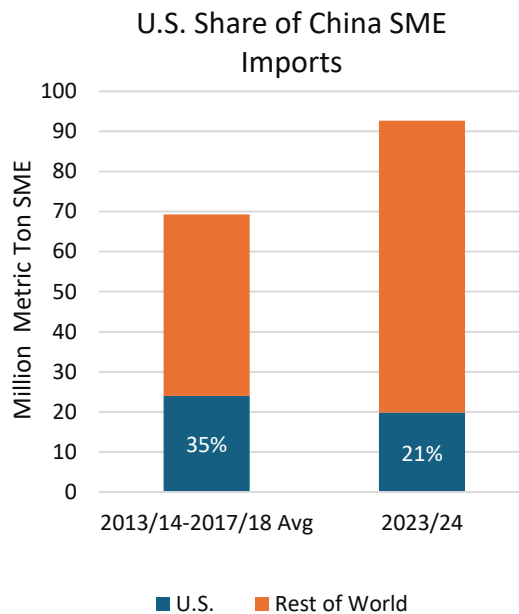

China started to import significant quantities of sunflowerseed meal in 2018/19, primarily from Ukraine, after a new protocol was established in late 2017 (see [Post report²](#)). Significant amounts have

¹ SME, a unit of measurement which applies weights to oilseed meals based on nutritional content for comparability.

² GAIN report: Ukraine signs sunflower meal protocol with China.

also come from Russia since 2022. Similarly, rapeseed meal, primarily from Canada, has reached prominent levels in recent years.

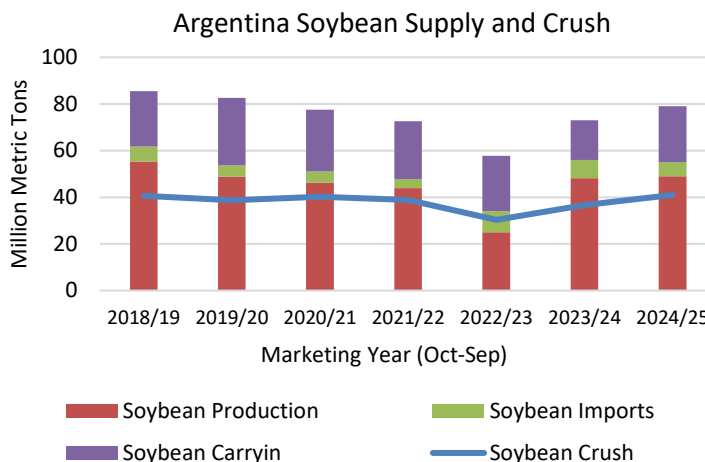

In the last 5 years, China has shifted away from U.S.-sourced soybeans, both as a percentage of total SME and in absolute tonnage. The increased importation of other feedstuffs like rapeseed and sunflowerseed meal may have contributed to this change, as higher global production led to more competitive prices over time. However, this trend pales in comparison to the increased utilization of soybeans from Brazil. The share of China's soybean imports that came from Brazil rose from 62 percent in 2017/18 to 71 percent in 2023/24, while the U.S. share declined from 30 percent to 22 percent. This shift was in part driven by lower prices for Brazilian soybeans resulting from increasing Brazilian production and a weak Real compared to the U.S. dollar. From 2013/14-2017/18, unit values for China imports of U.S. soybeans were approximately 2 percent greater than those for Brazilian beans. In 2023/24, Chinese importers paid an average 13 percent more for U.S. soybeans than those from Brazil, according to import unit values (China Customs Statistics).

On a volume basis, China's reliance on imported soybeans continues to grow. A moderate shift towards other protein sources such as rapeseed and sunflowerseed meal has hardly dented an increasing reliance on soybeans from Brazil, while imports of U.S. soybeans continue to decline. Based on the most recent FAS export sales reporting data, soybean commitments to China are at a 5-year low and Brazilian soybeans are trading at a significant discount to U.S. origin.

Argentina Soy Meal & Oil Exports Steady Despite Production Cut

The 2024/25 (October-September) export forecasts for Argentina’s soybean meal and soybean oil exports are unchanged this month, holding steady despite an expected reduction in soybean production. In recent weeks, dryness in some of Argentina’s growing regions has diminished crop conditions, lowering the production forecast by 3.0 million tons to 49.0 million. However, robust supplies from a still-large crop and bolstered by imported soybeans from neighboring countries are expected to enable strong crush and soybean product exports. Additionally, the recent reduction in Argentina’s export tax for soybean products and high global vegetable oil demand have also contributed to maintaining the 2024/25 forecasts for exports of soybean meal at 28.0 million tons and soybean oil at 5.8 million tons. The 2024/25 local year (April-March) export forecasts for soybean meal and oil also remain unchanged.

Argentina soybean crush for the October to December 2024 quarter hit record levels, exceeding 11.2 million tons according to national data. This period generally sees a decline in crush volume compared to the months following harvest. However, crushing did not slow significantly, and domestic

Source: Trade Data Monitor LLC; Argentina Ministerio de Economia.

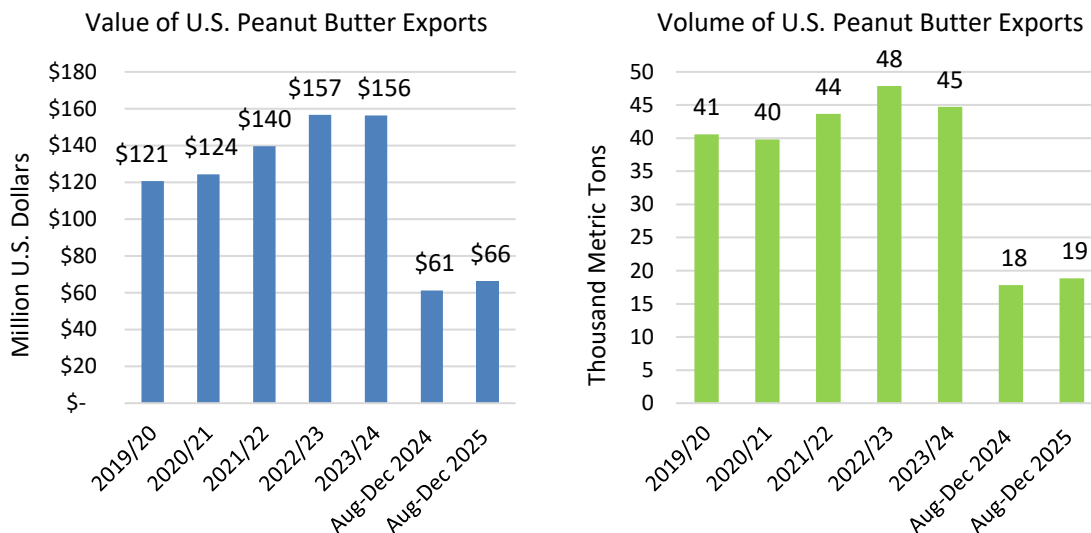

supplies were supplemented by imported soybeans from Paraguay and other South American producers. Competitive soybean oil prices and high vegetable oil demand were key contributors to unseasonably high crush volumes. This resulted in record soybean oil exports and the highest soybean meal shipments in nearly 2 decades for the October to December quarter.

As Argentina’s harvest approaches (and the local marketing year begins in April), several factors suggest a

continuation of strong crush and product exports. At 49.0 million tons, 2024/25 production is forecast to remain in the upper half of crops in the last decade, with stocks fully recovered from the 2022/23 drought year. Soybean oil demand is expected to remain elevated given relative tightness in global vegetable oil markets and rising biofuel demand. The recently announced reduction of Argentina’s

export taxes on items including soybeans and its products (see [Post report](#))³ through June 30, 2025 should also incentivize crushing and exporting during this period, though momentum may be affected by a large incoming crop and high expected crush from Brazil.

2024/25 Early Season U.S. Peanut Butter Exports Recover

Source: USDA Global Agricultural Trade System (GATS)

The United States is the world's fourth largest peanut producer and accounts for nearly 6 percent of the global crop. With a large peanut output also comes peanut butter production and exports. Over the past few years, peanut butter exports grew before falling in 2023/24 (August-July). 2024/25 early season trade data already show a 6-percent recovery in peanut butter exports. August-December shipments reached nearly 19,000 metric tons valued at over \$66 million.

Last year, U.S. peanut exports increased over 20 percent following a drought in Argentina, which left fewer peanuts available for domestic processing. Peanut food use declined nearly 5 percent, also affecting peanut butter output and leading to a 7-percent export decline.

Nearly half of U.S. peanut butter exports are shipped to Canada and Mexico. The remaining shipments were to Asia (with South Korea surpassing Japan), the Middle East, and Europe in the last 2 years. The top 5 export markets accounted for nearly two-thirds of total U.S. sales.

³ GAIN report: Argentina slashes export taxes amid economic pressures, sparking hope for Argentine farmers.

Top 5 U.S. Peanut Butter Export Markets

Source: USDA Global Agricultural Trade System (GATS)

Exports to China and the European Union declined significantly in the last marketing year. China is a major peanut producer and reduced demand for peanut butter imports last year due to a record peanut crop. For the European Union, difficulty in meeting the EU’s strict aflatoxin limits curbed U.S. peanut butter exports to the region as increased screenings in the past led to rising import costs. This is especially an issue for consumer-ready products as the permissible levels for the EU are more restrictive than for the United States. While U.S. exports to the EU fell 39 percent in 2023/24, shipments to the United Kingdom increased by a third as peanut butter grows in popularity.

Other Major U.S. Peanut Butter Export Markets

Source: USDA Global Agricultural Trade System (GATS)

OVERVIEW 2024/25

The global oilseeds production forecast is down 2.7 million tons to 677.7 million this month on lower Argentina and Paraguay soybean, not offset by an increase in China cottonseed and Kazakhstan sunflower production. Oilseeds trade remains unchanged at 207.3 million tons, with higher U.S. rapeseed exports offsetting lower sunflowerseed exports by Argentina. Oilseeds ending stocks are lowered 4.3 million tons to 140.0 million on lower Argentina and Brazil soybean and Argentina sunflowerseed and peanut stocks. Global crush is raised nearly 600,000 tons to 561.3 million on higher Brazil soybean crush, not offset by lower Paraguay soybean crush. Global meal trade is up 700,000 tons to 108.1 million on higher Brazil soybean meal exports, despite lower shipments from Paraguay.

The projected U.S. season-average farm price for soybeans is lowered to \$10.10 per bushel.

EXPORT PRICES

Since the last WASDE, soybean export prices for the United States, Brazil, and Argentina increased amid a lower global production outlook. Argentine soybean prices topped the market in mid-January as dry weather conditions lowered production expectations, but ended just below the United States as Argentina announced a reduced export tax on soybeans and products. Brazil soybeans maintain a discount during its record crop year, even amidst harvest delays.

Soybean meal prices declined in major markets as record crushing continues to meet increased demand for soybean oil. Soybean oil prices strengthened globally throughout January. Strength in U.S. soybean oil prices drove convergence with Malaysian palm oil this month as soybean oil exports meet increased demand for palm oil substitutes. Argentina soybean oil emerged as the world's discount oil this month fueled by record crush and export tax cuts. Malaysian and Indonesian palm oil prices decreased on continued weak demand though remain high on decreased production in Malaysia and increased domestic stocks in Indonesia.

Ukrainian sunflower seed oil prices continue to rise as supplies tighten following production losses. EU rapeseed oil prices declined in tandem with fuel prices, exacerbated by lower demand from the domestic biofuel industry.

2024/25 OUTLOOK CHANGES (All figures are in thousand metric tons)

Country	Commodity	Attribute	Previous	Current	Change	Reason
Brazil	Meal, Soybean	Exports	21,000	22,000	1,000	Strong biofuel demand and favorable crush margins
China	Oil, Sunflowerseed	Imports	1,100	900	-200	Weak imports to date
India	Oil, Palm	Imports	9,400	8,900	-500	Negative refining margins and slow import pace
	Oil, Sunflowerseed	Imports	1,900	2,300	400	Stronger than expected Q1 shipments
Indonesia	Oil, Palm	Exports	24,200	24,000	-200	Weak exports to date
Iran	Meal, Soybean	Imports	1,975	2,675	700	Strong import pace to date
Paraguay	Meal, Soybean	Exports	2,000	1,725	-275	Reduced crush on lower production

ENDNOTES

REGION DEFINITIONS

North America: Canada, Mexico, the United States

Central America: Belize, Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, Panama

Caribbean: Cuba, Dominican Republic, Haiti, Jamaica, Trinidad and Tobago

South America: Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Guyana, Paraguay, Peru, Suriname, Uruguay, Venezuela

EU: Austria, Belgium/Luxembourg, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Malta, Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, and Sweden. Effective January 1, 2021, the separation of the United Kingdom (UK) from the European Union (EU) was complete, including trade between both entities. Starting in May 2021 with the release of 2021/22 data, grain PSDs reflect EU27 (shown in the PSD system as “European Union”) and UK separately. Beginning with the release of 2021/22 data, historical data for both EU27 and the UK are provided for 5 years (2016/17 through 2020/21).

Other Europe: Albania, Bosnia and Herzegovina, Former Yugoslavia, Gibraltar, Iceland, North Macedonia, Montenegro, Norway, Serbia, Switzerland, United Kingdom

Former Soviet Union: Armenia, Azerbaijan, Belarus, Georgia, Kazakhstan, Kyrgyzstan, Moldova, Russia, Tajikistan, Turkmenistan, Ukraine, Uzbekistan

Middle East: Afghanistan, Bahrain, Iran, Iraq, Israel, Jordan, Kuwait, Lebanon, Oman, Qatar, Saudi Arabia, Syria, Turkey, United Arab Emirates, and Yemen

North Africa: Algeria, Egypt, Libya, Morocco, Tunisia

Sub-Saharan Africa: all African countries except North Africa

East Asia: China, Hong Kong, Japan, South Korea, North Korea, Macau, Mongolia, Taiwan

South Asia: Bangladesh, Bhutan, India, Nepal, Pakistan, Sri Lanka

Southeast Asia: Brunei, Burma, Cambodia, Indonesia, Laos, Malaysia, Philippines, Singapore, Thailand, Vietnam

Oceania: Australia, Fiji, New Zealand, Papua New Guinea

OTHER NOTES

Marketing Years (MY): MY refers to the 12-month period at the onset of the main harvest, when the crop is marketed (i.e., consumed, traded, or stored). The year first listed begins a country's MY for that commodity (2022/23 starts in 2022); except for oilseeds in certain Southern Hemisphere countries, where the second year begins the MY (2022/23 starts in 2023). For a complete list of local marketing years, please see the FAS website (<https://apps.fas.usda.gov/psdonline/>): go to Reports, Reference Data, and then Data Availability.

Stocks: Unless otherwise stated, stock data are based on an aggregate of differing local marketing years and should not be construed as representing world stock levels at a fixed point in time.

Consumption: World totals for consumption reflect total utilization, including food, seed, industrial, feed, and waste; as well as differences in local marketing year imports and local marketing year exports. Consumption statistics for regions and individual countries, however, reflect food, seed, industrial, feed, and waste only.

Trade: All PSD tables are balanced on the different local marketing years.
